Summary

Full Stack Developer with **over 3 years of experience** and strong command of TypeScript. I have expertise in modern Front-end (React, Next.js, Remix, Astro) and comprehensive experience in Back-end (Python, Node.js, NestJS), Mobile (React Native, Expo), DevOps for cloud solution deployment and AI agents. At **Lumetis**, I am the top contributor to a legal management platform. I am the creator and **maintainer** of StarDust, an **Open Source** platform for teaching programming logic. While pursuing a degree in **Cross-platform Software Development** at Fatec São José dos Campos, I serve as **CTO** of the Ctrl Alt Del group, leading a collective of developers in building technological solutions for academic and corporate challenges.

Professional Experience

Lumetis | Full-time

— Full Stack Developer | May/2026 – Present

Top contributor to HMS, a legal services management platform that brings a law firm's intake, engagement and case tracking into one traceable, LGPD-compliant workflow.

- ✓ Built the Formalization module end to end, including an electronic signature gateway integrated with Documenso, with OTP, a public signing page, webhooks and provider reconciliation.
- ✓ Proposed in an RFC and built an AI PR reviewer on Mastra, with five parallel reviewers (architecture, performance, regression, requirements and security) and evals for recall, false positives and cost.
- ✓ Delivered case management, scheduling and intake features, such as case history, the appointments calendar and the operational intake list.
- ✓ Worked from the system architecture (event-driven modular DDD) to setting up the deployment infrastructure on Coolify.
- ✓ Strengthened continuous delivery with sharded integration tests in CI, staging environment fixes, technical RFCs and incident post-mortems.

Skills: DDD, Event-Driven Architecture, AI Agents, Evals, CI/CD, API Integration, LGPD, Technical Documentation
Tools: React, TypeScript, TailwindCSS, NestJS, PostgreSQL, Supabase, Drizzle ORM, Inngest, Mastra, Turborepo, Docker, Coolify, Vitest, Playwright, GitHub Actions

Design Líquido | Internship

— Full Stack Web Developer | May/2025 – Dec/2026

Worked as the lead developer of the StarDust educational web platform, which teaches programming logic to IT beginners through gamification.

- ✓ Developed end-to-end (Full Stack) features, from interface prototyping to database and API integration.
- ✓ Responsible for the system architecture, ensuring component decoupling for high scalability and easy maintenance.
- ✓ Implemented CI/CD pipelines and automated test coverage (unit and integration) to ensure continuous and stable deliveries.
- ✓ The platform was adopted as a teaching support tool for incoming classes at Fatec São José dos Campos.
- ✓ Capstone project for the Systems Development technical program at Etec, highly praised by the examination committee.
- ✓ Implemented monitoring and observability routines for error tracking and production availability assurance.

Skills: Design Patterns, Clean Architecture, Cloud Computing, User Experience (UX), Databases, SOLID, Clean Code, CI/CD
Tools: Next.js, TailwindCSS, TypeScript, Supabase (PostgreSQL), Inngest, Hono.js, Remix, Jest, Heroku, GitHub Actions, Sentry.io, Delégua

Ancra | Freelance

— Web Developer | Nov/2024 – Dec/2026

Responsible for the full development of a news portal aimed at promoting the dissemination of social inclusion projects and regional content.

- ✓ Integrated the application with Sanity.io for global CDN content distribution, creating an intuitive Rich Text editing experience that gave full autonomy to columnists and editors.
- ✓ Applied SEO strategies (meta tags, alt attributes, semantic HTML, and image optimization), maximizing indexing and organic reach of the blog.
- ✓ Automated the drafting of CMS posts using an AI agent distributed across multiple smaller sub-agents.

Skills: User Experience (UX), SEO Optimization, CDN
Tools: Astro.js, TailwindCSS, TypeScript, Sanity.io, FastAPI, Python, Agno, Google Cloud Platform

Sertton Industrial | Freelance

— Mobile Developer | Sep/2023 – Dec/2023

Worked as lead developer throughout the complete lifecycle of a mobile sales application for large commercial vehicle body parts.

- ✓ Accelerated development by applying advanced context engineering techniques to systematically assist in AI-driven full application development.
- ✓ Used MVVM architecture pattern to ensure decoupling between business logic and interface, facilitating maintenance and testability.
- ✓ Responsible for interface prototyping, prioritizing usability and modern design principles to ensure an intuitive user experience.
- ✓ Integrated with the Yampi e-commerce platform REST API and developed a custom serverless function for shipping cost calculation.
- ✓ Automated the entire app publishing and update process on Google Play Store, eliminating manual processes and speeding up new version delivery (CD).

Skills: User Experience (UX), AI-Assisted Development, Software Architecture, API Integration, Clean Code
Tools: React Native, Expo, TypeScript, Jest, Cursor, Codex, Figma, Zustand, MMKV, GitHub Actions, Yampi API, Axios

Academic Projects

Smart Farming | Fatec – 1st Semester of 2024

Group development of a web application for telemetry and monitoring of a Smart Greenhouse on the university campus.

- ✓ Developed the integration layer with ESP microcontrollers, implementing automatic real-time sensor data ingestion to the database.
- ✓ Created dashboards with interactive charts for climate analysis and decision-making, using HTMX for dynamic interface updates without page reloads.
- ✓ Implemented automated routines (Python/Cron scripts) for daily data backup compression and cloud upload, ensuring information security.
- ✓ Complete containerization of the application and database using Docker, facilitating deployment and environment replication.

Skills: Agile Scrum Methodology, Requirements Analysis, Backlog Management, Teamwork
Tools: Python, Flask, HTMX, MySQL, Docker, TailwindCSS, HyperScript, IoT (ESP)
